

KlikNesa: UNESA Student Preloved Marketplace (Web Platform)

TL;DR

KlikNesa is a dedicated web platform for Universitas Negeri Surabaya (UNESA) students to buy and sell preloved items in a safer, more organized, and truly campus-focused environment. By combining student verification, local transaction filters, COD and e-wallet options, KlikNesa transforms scattered social-media-based trading into a structured, practical, and trustworthy student marketplace. Target users: active UNESA students seeking affordability and convenience while recycling quality items.

Goals

Business Goals

- Achieve at least 300 registered users and 150 active listings within the first semester
- Facilitate 100+ completed transactions before the end of the pilot period
- Attain a 25% monthly retention rate within the pilot cohort
- Establish KlikNesa as the preferred preloved trading platform in UNESA student communities (measured by survey/NPS)

User Goals

- Find and purchase relevant preloved items easily within campus communities
- Sell unused quality items securely to other verified students
- Minimize transaction risks via student verification and trusted local deals
- Save on daily and study essentials through budget-friendly second-hand products
- Complete transactions faster and more conveniently using COD or e-wallet options

Non-Goals

- Opening the platform to non-UNESA users or alumni in MVP
 - Supporting complex shipment/delivery solutions beyond campus meetups
 - Providing support for listings outside Ketintang, Lidah Wetan, or Magetan campus clusters
-

User Stories

Persona 1: Out-of-Town Student

- As an out-of-town student, I want to search for affordable study essentials located at Ketintang, so that I can buy within walking distance.
- As an out-of-town student, I want to complete transactions securely via COD or e-wallet, so that I avoid scams and shipping hassles.

Persona 2: Budget-Focused First-Year Student

- As a new student, I want to view recommended starting kits (bedding, books, electronics), so that I can quickly furnish my room without overspending.

- As a new student, I want reassurance that sellers are real students, so that I feel confident engaging in transactions.

Persona 3: Seller

- As a student with unused items, I want to easily list products for sale verified for my campus cluster, so that buyers can find and contact me efficiently.
- As a seller, I want to be notified of interested buyers instantly and manage my listings quickly, so that I can maximize my sales.

Persona 4: Platform Admin (Internal)

- As a platform owner, I want to verify users with student email or ID, so that only real students can join.
 - As a platform owner, I want to resolve disputes and monitor suspicious activities, so that the platform remains safe and trustworthy.
-

Functional Requirements

- **User Management & Verification** (Priority: Highest)
 - Student registration using UNESA student email or valid digital student ID (KTM) upload
 - Email verification workflow upon registration
 - Admin-facing user management dashboard (basic)
 - **Listings & Search** (Priority: Highest)
 - Create, update, and delete listings with multiple images and detail fields (title, category, description, price, campus location)
 - Search and filter by category, price, and campus location (Ketintang, Lidah Wetan, Magetan)
 - View individual listing details and seller profile
 - **Transactions** (Priority: Highest)
 - Chat initiation between buyer and seller for negotiation
 - COD meeting coordination and location sharing
 - Basic e-wallet integration (top-up, in-app payments, receipt)
 - Mark transaction as completed; prompt buyer/seller for rating
 - **Trust & Safety** (Priority: Highest)
 - Student-only community: platform-level verification
 - In-app reporting for suspicious listings or users
 - Admin view for dispute resolution
 - **Engagement & Notification** (Priority: Medium)
 - Push/email notifications for inquiries, messages, transaction updates
 - Homepage callouts for trusted sellers (badge), featured listings, and location-optimized recommendations
 - **Analytics & Metrics** (Priority: Medium)
 - Dashboard for core usage analytics: sign-ups, listings, completed transactions, retention, most popular categories
-

User Experience

Entry Point & First-Time User Experience

- Users access KlikNesa via direct link, campus promo QR code, or shared listing links on social media/groups.
- Landing page highlights value (affordable preloved goods, trusted student-only community, location filters).
- New users register using student email, triggering email verification or ID upload prompt.
- On successful verification, users see a brief onboarding/tutorial (e.g., how to search, post, and transact safely).

Core Experience

- **Step 1:** User logs in and selects a campus cluster (Ketintang, Lidah Wetan, Magetan)
 - UI: prominent campus cluster selector on home/dashboard. Responsive for mobile.
 - Filters persist for the session for listing relevance.
- **Step 2:** User browses or searches for items
 - Category and price filters, responsive grid/list view, clear product photos, trust badges shown
- **Step 3:** User views listing detail page
 - Full product info, seller profile, location pin, and direct chat/contact button
- **Step 4:** Buyer and seller communicate via in-app chat
 - Negotiation, meeting spot coordination, select COD or e-wallet payment option
- **Step 5:** For COD, users confirm meeting time and location; for e-wallet, secure payment is processed and seller gets notified
 - Payment status tracked and shown in transaction dashboard
- **Step 6:** Transaction marked as complete, rated by both parties
 - Option to report issues/disputes from transaction page
- **Step 7:** Seller can re-list, edit, or delete items as necessary

Advanced Features & Edge Cases

- User attempts signup with non-UNESA email or invalid ID: registration blocked, error guidance displayed
- Multiple spam listings or ratings trigger flag for admin review
- Seller fails to show up for COD (dispute case): flag transaction for admin intervention
- E-wallet top-up failure or refund scenario (basic error messaging)

UI/UX Highlights

- Mobile-first responsive layout
- Clean product photo presentation, brand color palette (green/yellow), friendly iconography
- Accessibility: Contrast, readable fonts, alt text for images
- Minimal steps to listing/transaction, guidance at critical steps (e.g., "+ New Listing" button onboarding)

Narrative

Sarah, a first-year UNESA student from another city, struggles to equip her boarding house room on a tight budget. She hears about KlikNesa and signs up using her student email, immediately feeling reassured by the student-only access. Within minutes, Sarah browses Ketintang-filtered listings and finds a gently used rice cooker and set of textbooks nearby. She

messages the seller via KlikNesa chat and agrees to meet on campus, choosing COD for simplicity. After the successful exchange, Sarah thanks KlikNesa for making student life more affordable. Over the months, she resells items she no longer needs, connects with other trusted students, and helps new classmates join the platform. KlikNesa becomes her go-to source for budget-friendly essentials, while the platform thrives as a safe, dynamic campus marketplace.

Success Metrics

- Achieve at least 100 completed transactions in the first semester
- Exceed 300 verified student sign-ups before final exams
- Maintain at least 25% monthly retention (users returning and/or listing more items)
- Over 80% user-reported transaction satisfaction (survey post-transaction)
- Under 2% reported fraud or safety incidents per transaction
- Platform stable above 99% uptime through pilot

User-Centric Metrics

- Daily/weekly active users (DAUs/WAUs)

of listings per active user

- Transaction satisfaction (ratings, follow-up survey)

Business Metrics

- Cumulative transaction volume (GMV) over pilot period
- User retention/churn rate month over month
- % of users transacting more than once

Technical Metrics

- Platform uptime (>99%)
- Average transaction finalization time
- E-wallet transaction success/failure rates

Tracking Plan

- Registered signup and verification events
 - Listings created/edited/deleted
 - Search/filter usage
 - Message/chat events
 - Transaction started/completed/canceled
 - Ratings submitted
 - Reports/disputes submitted
-

Technical Considerations

Technical Needs

- Secure web app: user registration/verification, listings CRUD, messaging, analytics dashboard
- E-wallet payment gateway (using reputable 3rd party API; minimal scope for MVP)
- Real-time notification system (email/push, optionally SMS)

Integration Points

- University email authentication or ID verification API (as available)
- E-wallet payment provider API
- Optional: integration hooks for social sharing (WhatsApp, X, Instagram)

Data Storage & Privacy

- Store user data securely; verify student credentials but do not store sensitive ID images longer than required
- All listings, messages, and transaction logs stored with audit trails
- Compliance with basic data privacy standards, with clear opt-in for communications

Scalability & Performance

- MVP should handle at least 1,000 concurrent users/listings
- Copy, backup, and failover procedures for minimum service interruption

Potential Challenges

- Fraud prevention around e-wallet (require verified student status for fund release)
 - Handling transaction disputes—manual admin triage required
 - Keeping UI simple despite feature set
 - Limited dev resources—prioritize core flows over advanced features at launch
-

Milestones & Sequencing

Project Estimate

- Small Team: 1–2 weeks of focused solo work (aim for completion one week before UNESA final exams)

Team Size & Composition

- Extra-small: 1 person (handles product, engineering, design, deployment)

Suggested Phases

Phase 1: Core Platform Build (5 days)

- Key Deliverables: Registration & verification, listing CRUD, search/filter (by campus), messaging, basic admin tools, mobile-first layout. Responsible: Solo builder.
- Dependencies: Access to university email/ID system, basic hosting set up.

Phase 2: Payments & Trust Layer (2 days)

- Key Deliverables: E-wallet integration, student trust badges, user reporting & admin dashboard, transaction flow (COD & digital payments). Responsible: Solo builder.
- Dependencies: E-wallet provider credentials, notification system.

Phase 3: Launch & User Feedback (1 day)

- Key Deliverables: Analytics dashboard, final bugfix, documentation, test onboarding, survey set-up for early users. Responsible: Solo builder.
- Dependencies: Access to test users, survey tools.
